Paper ID 700

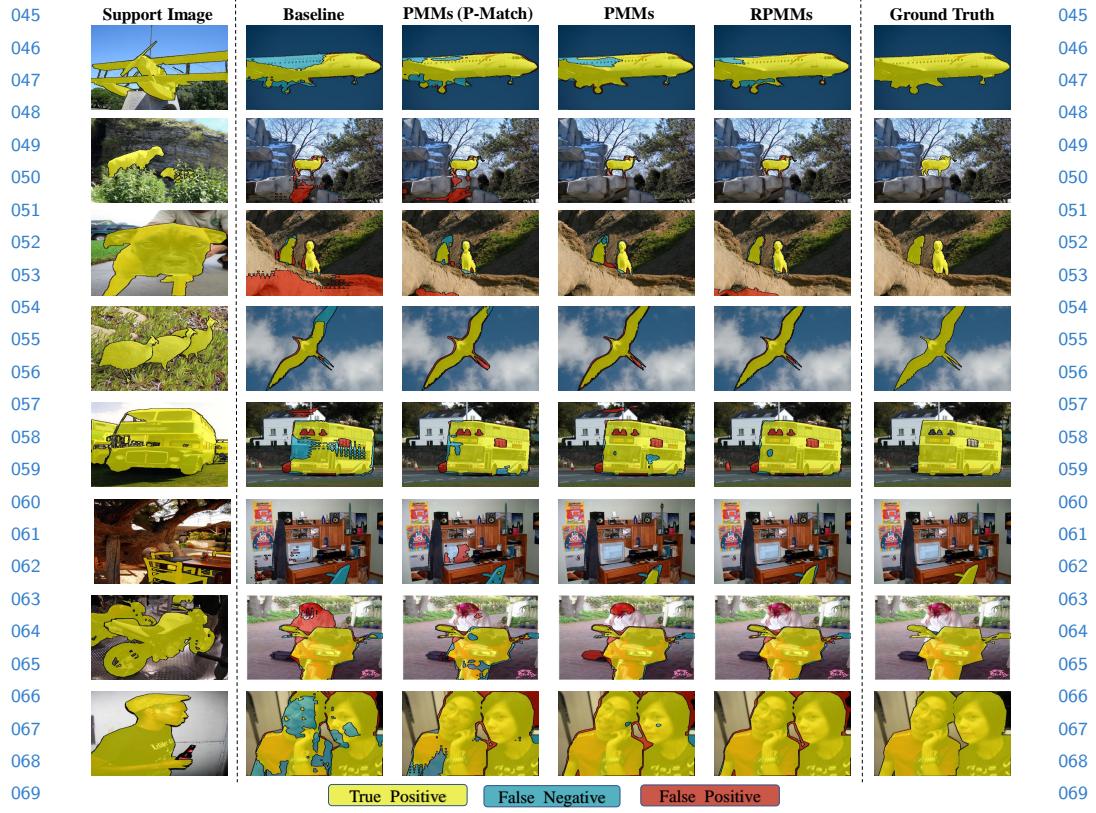

This supplementary material includes cross-validation classes for Pascal-5<sup>i</sup> and COCO-20<sup>i</sup>, additional semantic segmentation results and per-class performance comparison on Pascal-5<sup>i</sup>.

**Table 1.** Cross-validation classes for Pascal-5<sup>i</sup>

| Dataset               | Test class                                  |
|-----------------------|---|
| Pascal-5 <sup>0</sup> | aeroplane, bicycle, bird, boat, bottle      |
| Pascal-5 <sup>1</sup> | bus, car, cat, chair, cow                   |
| Pascal-5 <sup>2</sup> | diningtable, dog, horse, motorbike, person  |
| Pascal-5 <sup>3</sup> | potted plant, sheep, sofa, train, tvmonitor |

**Table 2.** Cross-validation classes for COCO-20<sup>i</sup>.

| Dataset              | Test class   |
|----------------------|--|
| COCO-20 <sup>0</sup> | person, airplane, boat, parking meter, dog, elephant, backpack, suitcase, sports ball, skateboard, wine glass, spoon, sandwich, hot dog, chair, dining table, mouse, microwave, scissors |
| COCO-20 <sup>1</sup> | bicycle, bus, traffic light, bench, horse, bear, umbrella, frisbee, kite, surfboard, cup, bowl, orange, pizza, couch, toilet, remote, oven, book, teddy bear                             |
| COCO-20 <sup>2</sup> | car, train, fire hydrant, bird, sheep, zebra, handbag, skis, baseball bat, tennis racket, fork, banana, broccoli, donut, potted plant, tv, keyboard, sink, toaster, clock, hair drier    |
| COCO-20 <sup>3</sup> | motorcycle, truck, stop sign, cat, cow, giraffe, tie, snowboard, baseball glove, bottle, knife, apple, carrot, cake, bed, laptop, cell phone, refrigerator, vase, toothbrush             |

**Fig. 1.** Few-shot semantic segmentation results. ‘Baseline’ refers to the CANet method without iterative optimization. (Best viewed in color)

**Cross-validation classes.** Table 1 shows the cross-validation classes for Pascal-5<sup>i</sup>. Table 2 shows the cross-validation classes for COCO-20<sup>i</sup>

**Semantic segmentation results.** Fig. 1 compares the segmentation results of the baseline method, PMMs(P-Match), PMMs and RPMMs on Pascal-5<sup>i</sup>. Fig. 2 shows the results predicted by RPMMs on COCO-20<sup>i</sup> dataset.

**Comparison of per-class performance.** Fig. 3 compares per-class segmentation performance on Pascal-5<sup>i</sup>. It can be seen that our PMMs approach is effective for many classes on this dataset.

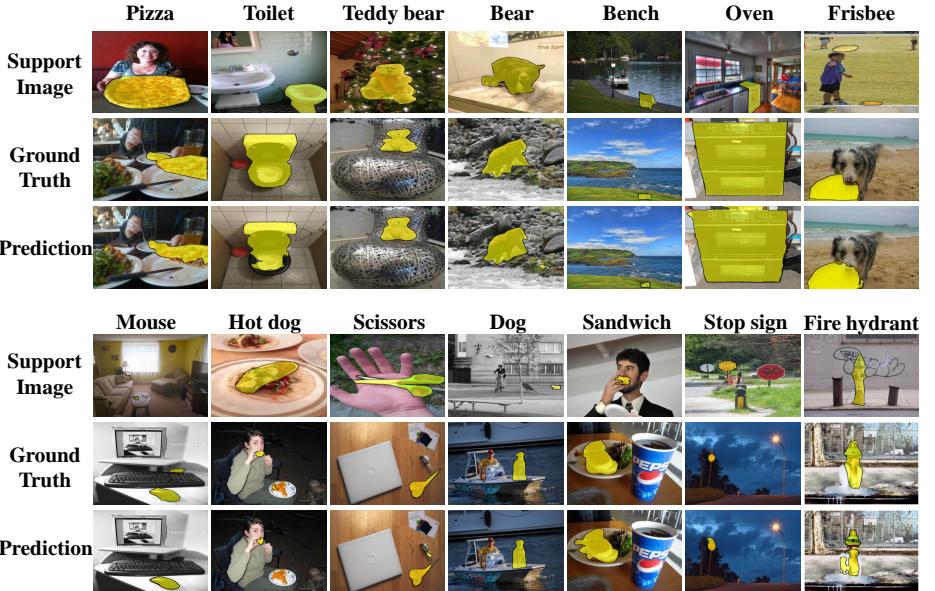

Fig. 2. Few-shot semantic segmentation results on COCO-20<sup>i</sup>.

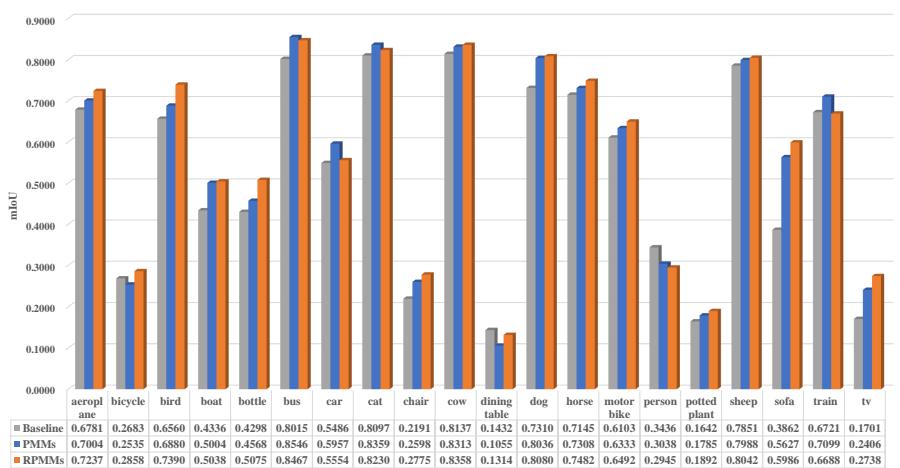

Fig. 3. Comparison of per-class segmentation performance on Pascal-5<sup>i</sup>.
